

KPI report — identity lifecycle and access governance

Owner: IT (Muhammad Ibrahim Akmal) · **For:** management · **Cycle:** monthly, with a quarterly access-review section **Source:** every number below names the file that produces it. **Nothing here is filled in until it has been measured.**

Status: not measured yet. This is the reporting template the project fills in from real lab runs. It deliberately shows "not measured" rather than plausible-looking figures — a report that cannot be traced to a measurement is worse than an empty one.

1. Before and after

#	Measure	Before	After	Better	Source
1	Joiner lead time (HR record to account ready)	not measured	not measured	lower	timed during the Phase 5 joiner scenario
2	Leaver revocation time (HR record to sessions revoked)	not measured	not measured	lower	the leaver audit entry and ticket timestamp
3	Enabled accounts with no HR record ("orphans")	not measured	not measured	lower	reports/orphans.csv
4	Enabled accounts with no logon in 90+ days	not measured	not measured	lower	reports/identity-hygiene-<date>.csv
5	Managed accounts' group count vs the role matrix (excess permissions)	not measured	not measured	lower	the access-review export
6	MFA coverage (% of users required to use MFA by policy)	not measured (no MFA)	not measured	higher	the CA001 policy scope and the sign-in logs
7	Blocked legacy-authentication attempts	not measured	not measured	— (context)	the Entra sign-in logs
8	CISA ScubaGear passing checks (whole tenant; aad/exo/teams)	not measured	not measured	higher	evidence/public/p02-ph3-scubagear-before.json and -after.json
9	Actions closed from the last access review	not measured	not measured	higher	business/p2-access-review-pack.md action tracker

How each number is produced (so a reader can check it rather than trust it):

#	Method
1	Record the HR change time and the account-created time from the audit log for the test joiner
2	Record the HR change time and the leaver audit entry time for the test leaver
3	Run the hygiene report over the managed accounts and count the "No HR record" findings
4	Run the hygiene report with a 90-day window and count the "Stale account" findings

#	Method
5	Compare each managed account's current groups against the role matrix in the access-review export
6	Read the CA001 include/exclude scope; corroborate with a test sign-in that is challenged
7	Filter the Entra sign-in logs for the blocked legacy client app type
8	Read the ScubaGear summary JSON written by 09-Invoke-ScubaGear.ps1
9	Count Closed rows in the action tracker against the total raised

2. Monthly summary (template)

Month	Joiners	Movers	Leavers	Joiner lead time	Leaver revocation time

Month	Stale accounts found	Stale accounts resolved	Orphans found	Orphans resolved

Month	MFA coverage	Legacy auth blocked	ScubaGear passes (aad/exo/teams)	Review actions open

3. How to read this report as a manager

- **Trend, not a snapshot.** One month's joiner lead time means little; if it is drifting up, the HR record is being updated late, and that is where the fix belongs.
- **Zero is not always good.** Zero leavers in a month is normal. Zero leavers *ever* means the HR file's `Status` column is not being maintained, and the leaver timer never starts.
- **MFA coverage is a policy scope, not a feeling.** The figure is the share of user accounts the policy covers, not "most people seem to have set it up".
- **ScubaGear passes move slowly.** Tenancy configuration is a set of dozens of settings, so expect single-figure movements per month, not a leap to 100%.

4. What the business decides from this

If the report shows	The decision needed
Leaver revocation time above the 15-minute target	Whether HR is recording leavers promptly (a process issue, not a technical one)
Stale accounts unresolved for two months	Whether to disable the accounts automatically, with the department head consulted
Review actions staying open	Whether the department heads' review deadline is realistic
MFA coverage below 100%	Whether the remaining accounts are genuinely exempt or simply missed

Lab note: Halden Distribution Ltd. is a **fictional company** and the 85-person HR file is **synthetic**. This report template is real; the figures appear only after the lab run, and each one is traceable to the file named in the Source column.

Halden Distribution Ltd. — home-lab portfolio artifact (fictional company, real configurations). Generated from p2-kpi.md on 2026-10-02.
